

Vector v. Raster

VECTOR

A vector file is composed of points and lines. This type of rendering style produces a much cleaner image with a much smaller file size. This is a good file type for logos and trademarks. Some popular software programs that produce vector files are Corel Draw, Macromedia FreeHand, and Adobe Illustrator.

RASTER

Raster files are composed of pixels, or small colored squares. This is the file type most digital photography is composed of. Vector files are not capable of producing the generous number of colors that help to create depth and shading. A popular software program for producing raster files is Adobe Photoshop.
